

# DASH<sup>5</sup>

DOCTORS **A**gainst **S**courges of **H**umanity: Unit 5

May 2013

## DEVELOP A CURE

**THREAT LEVEL: BLACK**

### ASSIGNMENT #7

Now that we know the infectious sound sequence was picked up and is spreading by songbird mimicry, we need to find a cure.

#### DETAILS:

DASH<sup>5</sup> is isolating a two-word component of a potential cure. We've begun drawing blood from several patients, and these "drawings" can be found in the grid enclosed. Each row and column contains exactly one matching pair of drawings, representing similar words. Record these pairs on the second page enclosed, listing the drawings within each row or column from left to right or top to bottom. Any drawings that go unused, and blood types that occur less frequently, should be used in your final analysis.
